Education

University of Texas at Austin

August 2023 – May 2027

Bachelor of Science in Computer Science; Minor in Business; 3.7 GPA / 3.6 Major GPA

Austin, TX

Relevant Coursework

- Data Structures, Discrete Math, Algorithms Analysis, Matrices, Artificial Intelligence, Linear Algebra, Computer Architecture, Calculus, Operating Systems, Cloud Computing, Software Engineering

Experience

IBM

May 2026 – August 2026

Software Engineer Intern – Key Protect (Cloud Security)

Austin, TX

- Automated SDK generation across 4 languages (Python, Go, Java, Node.js) from the IBM Key Protect OpenAPI specification, cutting SDK release effort by 80% and ensuring cross-language API parity.
- Validated SDK correctness by executing 57 PyTest integration tests against live Key Protect REST API endpoints, catching specification inconsistencies and enforcing API contract.
- Authored a technical design document outlining a standardized framework for updating the Key Protect OpenAPI specification to maintain SDK generation compatibility across future API revisions.

Texas Comptroller of Public Accounts

September 2025 – December 2025

Fullstack Developer Intern

Austin, TX

- Developed production-ready Field Appraisal System utilizing React front end, C# .NET with MS SQL microservices, supporting data-driven decision making and internal state workflows.
- Implemented a file import pipeline utilizing Backend for Frontend (BFF) API and Amazon S3, enabling virus scans and asynchronous processing for scalability and reliability.
- Implemented RESTful APIs backed by SQL databases to support transactional workflows, improving data consistency and end-user responsiveness through collaborative design and code reviews.

Outlier AI

May 2024 – May 2025

AI Evaluator

Remote

- Evaluated large language models and generative AI systems for Fortune 500 enterprise clients, identifying failure cases and improving inference accuracy through structured adversarial testing.
- Designed training and evaluation frameworks for production AI systems across multiple industry verticals, increasing model response quality, reliability, and alignment with real-world use cases.
- Delivered data-driven performance reports to AI development teams, reducing overall model error rates and improving output consistency across diverse task categories.

Projects

EducaNation – Fullstack Web Application | React, Flask, PostgreSQL, Docker, AWS

December 2025

- Designed and developed a Fullstack web application able to serve 50K+ relational records and pagination with less than 300 ms average API response times to serve an underserved community.
- Developed RESTful APIs with server side pagination and query filtering, reducing payload sizes by around 70% and improving front end scalability and loadtime.
- Built responsive UI components and interactive data visualizations with React, Bootstrap, D3, and Recharts; used AWS Amplify for front end development.
- Worked in a cross functional 5 people team using Git based workflows, peer code reviews, and CI tested backend services, maintaining a 90%+ test coverage with PyTest and GitLab.

CPU Emulator | C, AArch64 Assembly, GDB, Git, SSH, Linux

November 2024

- Designed and built a CPU emulator with a functioning multi-stage pipeline (fetch, decode, execute, memory, write-back) replicating real processor behavior.
- Implemented cache management and hazard detection mechanisms, reducing memory access penalties.
- Tested using AArch64 Assembly for performance optimizations, debugged with GDB.
- Utilized UTCS Linux machines through SSH for remote development and cross-platform reliability.

Technical Skills

Languages: Java, Python, Go, C, C#, HTML/CSS, JavaScript, TypeScript, AArch64 Assembly

Developer Tools: Git, GDB, VS Code, Visual Studio, IBM Cloud CLI, PyTest, Swagger/OpenAPI, .NET CLI, NuGet, SQL Server Data Tools (SSDT), React Developer Tools, GitHub Copilot, AWS, REST APIs

Technologies/Frameworks: Node.js, React, Spring Boot, SQL Databases, .NET 8, MediatR, ASP.NET Core Web API, Domain-Driven Design (DDD), IBM Cloud (Key Protect), OpenAPI SDK Generation
